Education

- **Indian Institute of Information Technology, Ranchi** *2023-27*
  Bachelor of Technology in Computer Science CGPA: 8.38

Experience

- **Orion Eduverse** *Feb 2026 – Mar 2026*
  Full Stack Developer Intern Remote
  - Engineered an end-to-end session management architecture to facilitate seamless mentor-student interactions, driving a significant surge in user engagement and establishing the feature as a core asset for platform marketing campaigns.
  - Fortified platform authentication by migrating password hashing protocols from bcrypt to Argon2id, significantly enhancing resistance against brute-force and GPU-based attacks.
  - Automated the deployment lifecycle by establishing a robust CI/CD pipeline with GitHub Actions and Docker, ensuring reliable application releases and secure management of environment secrets.
- **Hawk Aerospace** *Sep 2025 – Dec 2025*
  Software Development Intern Remote
  - Architected a centralized Web Admin Dashboard to unify real-time data streams across multiple operational modules, streamlining platform-wide governance and control.
  - Spearheaded frontend development for the corporate landing page, designing state-driven, interactive components to seamlessly showcase product capabilities and elevate the overall UI/UX.
  - Developed a robust Node.js middleware for real-time data synchronization between Firebase and MongoDB, providing a reliable, consolidated data source for the Admin platform's analytics engine.

Technical Skills & Interests

Languages: C, C++, JavaScript, Python, Java
Frameworks/Libraries: NextJs, ReactJs, NodeJs, ExpressJs, React Native, Socket.io, Tailwind CSS, Redux Toolkit, RTK Query, Zustand, Framer Motion, JSON Web Token (JWT), Stripe, REST API
Cloud/Databases: Firebase, MongoDB, Mongoose (ODM)
Developer Tools: Git, GitHub, Docker, Embedded JavaScript (EJS), VS Code, Postman, Jira, npm, WebSocket
Areas of Interest: Scalable Backend Architecture, Machine Learning Engineering, Data Engineering & Algorithmic Optimization, Modern Web Ecosystems & Responsive Design

Achievements & Coding Profile

- **LeetCode | Codeforces | CodeChef**
- **Secured Global Rank 103 (Round 1091) and Rank 260 (Round 1087) on Codeforces (Max Rating: 1495).**
- **Secured Global Ranks 408, 508, and 786 in weekly contests out of 30,000+ participants on LeetCode (Top 3%).**
- **Attained a 3-Star rating (Max: 1658) on CodeChef, securing Global Ranks 101, 551, and 654 in Starters contests.**
- **Actively solved 300+ algorithmic problems and participated in 50+ coding contests.**
- **Recognized as a GreatStack Stars Member for impactful MERN implementation.**

Personal Projects

- **Food Delivery Platform**
  Engineered an end-to-end food delivery ecosystem with a customer storefront and admin portal.
  - **Tech : MongoDB, ExpressJs, ReactJs, NodeJs (MERN), JWT, Stripe API, Multer**
  - Engineered a centralized administrative portal to orchestrate restaurant inventory, process multipart file uploads via Multer, and monitor end-to-end order lifecycles.
  - Integrated the Stripe API for secure checkout, successfully processing 100+ test transactions with a 99% success rate.
  - Designed a stateless, JWT-driven authentication architecture with Role-Based Access Control (RBAC) to secure internal REST APIs and prevent unauthorized data mutations.
- **Code Sync**
  Real-time collaborative coding platform for synchronized pair programming and remote technical assessments.
  - **Tech : ReactJs, NodeJs, ExpressJs, Socket.io**
  - Enabled real-time collaborative code synchronization for 10+ concurrent users via Socket.io and Yjs (CRDTs), maintaining synchronization latency below 100ms.
  - Built secure room-based collaboration with live presence tracking and reconnect recovery.
  - Implemented CRDT-based concurrent editing with deterministic merge resolution, eliminating overwrite conflicts and reducing setup time by 40%.
